But, I still think Elements is the better choice for getting started. Photoshop CC has more capabilities especially the new feature called Content-Aware Fill, but I am still a big fan of Elements' simple to use features. I also like how Adobe is beginning to integrate Adobe Illustrator into Photoshop, and they are adding support for Apple's Final Cut Pro X. It's another way for Adobe to get the photography community excited about its applications. Photoshop demonstrates the continued importance of the Adobe toolkit: without it, it's not possible to compete with the world's leading creativity apps. Still, I'm confident the competition will recover with the release of the much-proposed Adobe Lightroom Mobile.

Designers have been using Adobe's flagship photo-editing program to style photos for as long as Photoshop has been around, but now that software is getting an upgrade of its own. Photoshop is always at the front of every new flagship release of Mac software, and that tradition continues with Photoshop CC 2018.
