adobe pdf is a file format used to display and store digital documents. pdf is based on pdf/a-1a, and allows pdfs to be reflowed, recalculated, and modified in ways that are not possible with native pdf documents. the pdf format is commonly used for web documents (such as webpages) as well as for documents created in desktop publishing software like adobe acrobat. the reason that you get gibberish is probably that you are converting a pdf file that has been created by using a pdf editing tool that is different from the tool that you are using. if you are converting from a tool that uses pdfmaker, then the source file has to be created by adobe acrobat pro. the.odt format is a great choice for converting documents and text files that you have already created, because it is quick, easy, and free. adobe acrobat pro can easily convert the file format to any other file format that you want to use, such as.doc,.rtf, and.xls. on windows, "adobe pdf viewer" is called acrobat reader. the default settings are stored in a file named "adobe pdf viewer" in the folder c:\program files (x86)\adobe\adobe acrobat reader dc\settings\acrobat reader settings\general. the file name is the name of the program and the acrobat reader settings folder is its folder in the program files folder. each new version of the acrobat reader removes a previous version's settings. if a user elects to not use this functionality, the new settings will apply to that user only. if a user wants to use the previous settings, he/she must manually rename the settings file to the previous version's name. for example, if a user has renamed "adobe pdf viewer" to "adobe acrobat reader 10 settings", he/she should rename "adobe pdf viewer" to "adobe acrobat reader 9 settings".
