In AutoCAD Crack 2008, there is a C++ application programming interface (API) called Workbench to replace VBA. Unlike VBA, which only works on Windows and is dependent on the Office application suite, Workbench will be available on Windows and OS X. Integrated development environment AutoCAD supports the Visual Studio, Eclipse, Code::Blocks, and Netbeans IDE development environments, and is available in 32-bit or 64-bit editions. Web-based development AutoCAD provides support for various Web development environments. Web-based applications include Web applications, cloud computing, and web applications. AutoCAD uses the Microsoft.NET framework in its implementation. AutoCAD JavaScript API is used in the AutoCAD Javascript Extension. Third-party development Autodesk provides a third-party extensibility framework, which allows third-party developers to integrate AutoCAD with other software and to add new features to AutoCAD. The Autodesk Exchange Apps store allows third-party developers to create products based on the tools and knowledge of the Autodesk design and drafting applications. The ObjectARX C++ API provides a base for writing third-party AutoCAD extensions. File formats AutoCAD supports the following file formats: AutoCAD DXF – the native format, used for the majority of feature documentation and drawings. The DXF file format was developed by AECI (American Electronics Commission International), the predecessor to Autodesk. Originally called ARCHITECTURE DIAMOND, it was adopted by AutoCAD and is now widely used by other CAD programs. AutoCAD DWG – the native format for most drawings and documentation. DWG is based on the dBase III database.

DWG files are usually used in the printed version of a drawing. AutoCAD PLY – a native format for 2D plywood sheets, it is commonly used for part documentation and drawings AutoCAD VBA – a native format for handling structural members (trusses, beams, joists, studs, etc.) and is the native format for the Structural Profiles feature.
