More than 200 students at a Brooklyn high school were instructed to leave the building, even though a bomb squad had not yet been called out to the building, authorities said. The evacuation order came just before 4 p.m. Monday at P.S. 174 on Sixth Avenue, in the Brighton Beach section of Brooklyn, after a student alerted officials of a "device." It took the students more than an hour to return to class, after being told that the device was nothing more than an exercise video, according to witnesses. At least two students "suffered panic attacks" after the evacuation, according to a note from Principal Janice Wills. "This is not something we have ever done before," she wrote. "Every student is safe, thank you to all of the police and firemen who took care of us." No injuries were reported. "It was a high-risk area and we had a bunch of students," said first-grade teacher Kate Wells. "The students were running around and we had a bunch of them.

Hey all, I wanted to start a discussion on the difficulty in conveying the concept of 'periodic table style elements' to the lay person. Historically, the periodic table as we have grown to know and love has some very interesting features: Overlooked, 'alternate' nomenclature to help with memorization All elements in a table are chemically reactive, since the periodicity of all elements in the table is defined by number of protons. Elements which aren't found in the environment can be found in dust! In the 60s and 70s, the focus was on understanding the structure of the atom. By the time the discovery of the Higgs Boson was announced, the periodic table was already defined! In contrast to the historical table, the new table doesn't include a single element which is not naturally occurring. There are multiple named elements in the new table which have yet to be 'discovered'. If there were any possibility of the new table being named after a person, the suggestion would be James Chadwick. Instead the people behind this move will go back to working out the differences between their current table and the historical table. If you look at the periodic table, there are multiple sets of names. These names are all very important, for the set of names is what defines the category of element. This is a problem. Elements in the 'Alkali Metals' and 'Alkaline Earth Metals' group have the same name, 'period 7'. Neodymium, Europium and Terbium are 'lanthanoid' elements, which also have the same name! What is the basis of categorization? Science! In general, there are 3 ways to sort elements into sets: Defined by ionization energy Defined by number

## What's New in the AutoCAD?

Helpful tools include translation to other languages, annotation to support translation, and exporting to DWG or DXF files. Drawing assists help you with your drawings. New tools include ribbon shortcuts for common drawing operations, toggle buttons for drawing view options, and grids for greater accuracy. Other improvements include an improved pencil cursor and an easier way to create objects. See what's new in AutoCAD LT 2020 for Windows 7 and Windows 8 Download and Install: Press and hold the Ctrl key to open the toolbars (video: 2:28 min.) New ribbon-based options include BORDER, SMOOTH, ALIGN, FONT, and DIMENSIONS, and a new option for dashed lines: DASHED. The TEXT tool now automatically separates text with a colon and provides a new ribbon option to set the font type. The TEXT command is simplified and now supports all ranges of text, including paragraphs, columns, and labels. The option to add a textbox to your drawing is now in the CONTEXT command, and text has more impact on objects. To create text frames, now use a box rather than a rectangle. Ribbon tools now appear in the lower-left corner, reducing the need to click on toolbars. The Drawing Assistant tools now appear in the lower-right corner. Features: Table of Contents: AutoCAD and AutoCAD LT now have a table of contents. The table of contents appears after objects in your drawing. Xrefs: Xrefs are now supported for layouts, images, and text. Xrefs create hyperlinks to external files and protect your drawing files from loss, allowing you to retain important documents in case of a fire, theft, or other disasters. References: The Reference Manager lets you create, edit, and manage groups of references and components. This tool now shows the full path to referenced files. Images: The Object Browser for Images and Animation has been expanded to support more image and animation types, such as bitmaps and AI graphics. Protection: Protect a drawing with a password for your own peace of mind. A drawing protected with a password can no longer be opened by any users on your computer.
