Methods Routines Routines in AutoCAD Product Key are commonly referred to as commands. Routines are collections of statements that are executed in a particular order. They can include: macros Conditional statements procedures Routines are created using the keyboard shortcut Ctrl+F5, or "Get Macros" from the main menu. The editor window opens in Edit mode. The macro

name appears at the bottom of the window. One can write the macro code in the editor window and click the "Execute" button at the bottom of the editor window to run the macro. If the macro has a parameter list, they appear in the top of the editor window, and are required. Modes AutoCAD supports two modes: Draft, which is the normal or default mode, is the mode used for documents such as architectural, mechanical, and civil engineering drawings. Blocks mode, which is a more compact file format with the same information, was originally introduced for architectural design. Internals The two internal file formats, the native DWG format and the newer DXF format, are the primary file format of AutoCAD. The DXF format has been under development for some time. It is currently being phased in slowly. It will support import of existing DWG files, and export of AutoCAD to the DXF format. A feature called "slingshot" was announced by Autodesk in April 2007, as part of the DXF Format Initiative. The statement refers to automated support for changes in the DWG file format. The goal is that eventually the DXF format should be fully backward compatible. Autodesk plans to support a "SW" model, like the one from the "Tagged Image File Format (TIFF)" model, so that the underlying file may be changed or even modified by the DXF specification. Autodesk plans to eventually replace the internal native DWG format with a DXF file format. Workbooks The native file format is called a workbook. The worksheet contains the 2D drawings. The sheet has a number of rows and columns, each row containing a number of entities or shapes, some of which are drawings or blocks. The last row of the sheet contains the data for the section views. Each row contains the same entities, but with different data. The DWG and DXF formats are called workgroups and
