AutoCAD LT AutoCAD LT has a scripting language called ACADeShapes, which is for practical applications only. Although it is mainly geared towards developers, because the target user does not have to learn AutoLISP but rather the program that uses ACADeShapes, the AutoLISP API (see below) is still used to get the drawing's properties and display them in a table (imported from a.DLT file), for example the linetype's name, the number of objects in a group, the origin's coordinates and the angle the user has set for each of the objects. There is also an object documentation library named ACADOOM, which is a set of classes that developers can use to quickly create AutoCAD objects, just like using the Interface Builder in iOS or Android. In the latest release, there is also the scripting language UDL (Unified Descriptive Language), similar to AutoLISP. AutoCAD LT is available for Windows, Mac and Linux, and for the iPhone and iPad, through the App Store, or the AutoCAD (previously Callaway) app for Android. In the latest version, AutoCAD LT 2016, AutoCAD LT 2017 and AutoCAD LT 2018, the choice of C++ or Python is made at the time of installation. For most users, this will be the same one (C++), but there are users who prefer Python, or the other way around.
