Results of the Chernobyl Medical Information Center's monitoring]. The main task of the Chornobyl Medical Information Center is to collect data on radiation consequences of the Chornobyl accident and for disseminating information on this problem. The Center has been collecting data on clinical patients since the early nineties and has been maintaining all that information. The Center's monitoring is made in several areas: the whole body and regional lymph nodes, the central nervous system, the respiratory system, the digestive system and genitourinary system, acute and chronic radiodermatitis, as well as acoustic and vestibular injuries. There are also data on the effects on the offspring of irradiated women. The records show that the greatest number of patients with various somatic consequences of the Chornobyl accident belong to the first five years since the accident, the majority of the patients having been born in 1986-1988. There is no direct evidence on the influence of the Chernobyl accident on the incidence of some specific somatic diseases. The data collected by the Chornobyl Medical Information Center have proven to be an important source of information for the specialists dealing with the effects of the Chernobyl accident and the population at large.)I've made this one a few times and it's soo good! I'm going to make it in a few weeks! It's the perfect balance between sweet and savory. I can't eat a lot of it, I'll eat maybe half a cup and be done. But I am always so happy when I finish a loaf. I love the simplicity of it, a1d647c40b
