Recreated ball physics A new ball physics system will result in great decisions in 1v1 situations, more skilled players controlling the ball in tighter spaces and on-ball actions such as dribbling, short, and long range passes, and crosses. More skill and control on realistic-sized pitch The pitch size has been increased, creating a more realistic pitch for players to control. Players can run further, and can take the ball further, to avoid defenders. Fans can now enjoy the pitches recreated to a standard size, and FIFA 22 is the first year where all pitches are recreated to the same size. Intuitive controls Intuitive controls remain the core of the gameplay, but players will find in-game features have been re-imagined to be more user-friendly. Better AI controlled opponents The AI has been enhanced by re-designing the physics engine to create a more stable game. AI-controlled teammates will be able to time their run-up longer before attacking, making them harder to beat. This will help create more balanced matches and increase the game's longevity. All of this, combined with new animation and visual effects, means the ball will feel more realistic and "livelier". A deeper dribbling system A deeper dribbling system has been developed, as well as dribbling with any foot, passing with any foot, using both feet, and more options for defensive dribbling. New jumping system FIFA 22 introduces an improved jumping system that will result in more realistic jumps, more responsive and realistic collisions, and better control over where players end up after a jump. Sliding tackles Sliding tackles are a part of the game that will truly test defenders. If a player slides tackles, he'll need to use all his muscles to make sure he can make the interception. If not, the player will lose the ball. If the player blocks the shot, a defender will get the ball - but if the player isn't able to block the shot, he'll lose the ball. Dynamic cutscenes and graphics FIFA 22 will introduce the best-in-class graphics and visual quality, which will display realistic and engaging gameplay. Players will experience more emotions in the form of more dynamic cutscenes that better express the action on the pitch.Q: Is posting funny pictures of yourself too'social'?
