What's New in the Measure Yahoo Widget?

Measuring the distance between the browser and any specified pixel has become an important means

to check whether the browser has followed your instructions. You have to input the amount of pixels on the page to measure. And you can also specify which lines on the page you want to measure the distance from. You can use your own designed measurement tool to measure from that point. Measuring Yahoo Widget can be used for desktop, phone and mobile sites. It is suitable for loading the screen devices such as mobile phone, kindle and browser. Homepage: Download: Reviews Blog Review Review by Richydo Review: Great Features: The app provides excellent features. The only problem I encountered was the feedback. When trying to ask questions about the widget, you didn't receive any feedback that the widget can be loaded. Also the widget was not working and I had to manually update the web page after having been redirected to the "help" page in order to see the redirection information. App Review: I have to be honest that I have no idea how this widget is developed. And it seems it is not developed by Yotpo but by Yahoo! Why? I have to admit that I am disappointed in Yotpo as most of their widgets look dirty and not clean. I think the developers should learn how to develop widgets in a very clean manner. Conclusion: Please don't get me wrong. I love Yotpo widgets and I use them frequently. I am just disappointed in the quality of their widgets.
