I have the LR5 preview and it's so much improvement! It is much faster to develop images (After all the speeding is not also as fast as its preview. I can pre-wipe, easily erase and re-size and still be browsing through thumbnails on my nice 19" iMac in the blink of an eye!) BUT is imho to much OSX UI for photoshop is worth a lot, and continues they get more and more like MS and Apple OS, the OSX will without the Mac or Mac Pro systems at my work will soon, will go die as well. This makes them very unpleasant software but with great capabilities. Adobe is a great company IMHO, I'm very satisfied, but now I'm not so happy.

*best regards* Overall, what's really annoying is that the 'Photo' tab is missing on the Lightroom site (even though it's in the latest release, 4.5) and I really like to see if there are any new features, I like to test the Beta versions of apps before buying.

I wanted to share this list especially with those LR4 users that have been waiting until LR5 came out for some hefty updates. I like the current features and the new ones are very exciting. Here are the new features and the benefits I've seen personally.
