In short, Lightroom is an application that makes the know-how you have in design, and the knowledge you have in editing images, come alive, no matter if you are an amateur or a professional. It covers practically all the bases, and it has even proven itself better than Adobe's own image-editing applications in the areas the company has recently focused on. Overall, Lightroom is an application that has taken its place among the best possible applications for photographers, graphic designers, and every other professional related to images. The best part of using photo editing software means that your artistic endeavors can look good and imaginative, and not just pretty. You should not be limited by the direction that you take in your editing on the image software. A few years ago, I gave a presentation on "the power of numbers" about where professional photographers are in their careers and how they can best position themselves. We looked at how to use cameras with digital sensors, how to use digital software to sharpen images, how (and when) to use specific software packages. Over the years, I've been moaning the loss of this great image editing tool - the pantoramic — for **digital panoramic photography**. Until now, Adobe was the only company making panoramic utilities that were easily used by people with modest-to-moderate computer skills.
