With the introduction of the MacBook Pro, Apple now makes it possible to replace your PC with a Mac. Many photographers would like to have an Apple Mac with a fast, light, long-lasting, portable system. You can have all of that. Photoshop could have been a clunky, ugly, behemoth. Instead, it became a juggernaut that created revolution upon revolution. The UI was more of a crutch than an obstacle, and it stretched the concept of desktop software long past its breaking point. And yet, even the newest version of Photoshop can be clunky and slow. It still needs to be as powerful as it is today - the 30 years it's had to develop and improve on. The problem here, like with Lightroom, is not the underlying architecture; it is the poor optimization and the usual Adobe bloatware. While the company has remarkably focused on Web technologies and social media, it just seems to have forgotten about the original and excellent Desktop applications. The fact that Photoshop is still available for Mac and Windows is a kind of miracle. From the text input to the brush settings to the almost comically clunky help and tutorials, this software sometimes seems like it was developed by a different generation.

Alternatives

Camera Raw is an excellent example of an alternative to converting RAW to DNG. It is the only application I have used that actually does not convert RAW images into DNG. Indeed, the only problem with Camera Raw isn't technical at all. Actually, it's mostly a matter of user interface. Camera Raw doesn't have the social media or community aspect of Lightroom. Instead of community, however, it has tutorials and tips. Instead of sharing with the community, you share with the instructors of the official Adobe online training courses. There may be another camera RAW alternative out there that I have not come across and if so, I will add it to the list. There are real alternatives to Lightroom.

It is a cloud-based file sync and share tool consisting of a tray application and an online service. One thing that I have used Photoshop for is the photo editing.
