Another Very good review. Thank you. Your work is to great for me. I'm a 30-something working professional with 20 years experience editing HD still photos (but no experience with Lightroom 5). I'm using Photoshop 6, Lightroom 3 and Photoshop Elements 7. So I expect a very different workflow than you have described for Lightroom beginners. Based on your experience, can you please give me an idea of the best workflow that will get me the best out of Lightroom 5? Because I'm such a big fan of Ableton live, the blog post that tests the laptop is also over here: http://jasonmcalacanis.com/2013/01/this-amazing-little-laptop-can-mix-and-proceed/The concept was a no brainer as I was surrounded by the most brilliantly designed computers that can actually run the music I produce.I'd love to do something like the above, but the problem is that I've been slack with this personal side hustle. I'm not prepared to dish out the time and build out the skills.I've found that I get a lot of value out of just offering the things I do for free because it lets me fine tune and work on the skills that are most needed to make money. I'm e-mailing a few buddies I think who could become very attractive clients, asking them to pay me a little for referrals-- every time I get a referral, they can bring me a couple of new clients. It's the easiest side hustle ever.So, I'm seeking advice. My life is so pre-jockeied that I don't currently have the time to build out any of the skills needed to

create a product. I've dipped my toe into programming in the past but didn't complete the product. I took 4 years of college (23 years ago) in communications and switched to history after finishing college. I've always been good with my hands and find it fun to tinker with products but lack the patience to throw together a product.What should I be doing instead? Any products I could build out with time in the future? ====== tamersalama Great to hear you're already in the right direction -- it sounds like you noted some very good requirements that you've already broached. You may find it helpful to have someone you trust validate your assumptions -- although as you pointed out, real-world experience is only valuable if applied, it may help to make sure what you've figured out is what you think.
