Adobe Photoshop 7.0.2 was released today, and it includes over a dozen fixes. The big news is the introduction of the Snapping feature, which will be available in both the CS3 and CS3 Extended versions of Photoshop. Snapping will be available by default in CS3 Extended in the next few weeks. This new feature allows you to create and edit Layouts quickly and easily. You can resize and reposition elements on a Layout, and then simply "snap" them to different parts of the Layout to create a final image. You can also "snap" images from one Layout page to another. This is an amazing feature that will allow you to create highly customized layouts. Snapping will be available in other Adobe products as well, such as InDesign, which can be purchased separately for $199.00.

There is no image analysis on the web, you can't use the Google Assistant, and the Smart Alerts application is still a little buggy and may need some work. Software does not always reach perfection, however, it is always possible to try and improve something. Adobe Photoshop CS6 has plenty of room for improvement and some of its user interface elements can be better. In this review, I want to show you few examples of all the things that can be improved. Let's see how Photoshop 6 handles them: **Tabs**: Tabs can be moved to the left and right side of the dialog. The look seems cleaner on the right side than on the left side. In any case, you cannot control the position of the tabs through the settings.

1. **Simple pane:** This setting controls the way tabs are displayed. By default, the tabs are displayed so that they fit a certain size. In this case, the tabs can be very small. In addition, you can also control the size of the tabs through the settings. I would say that the default setting is a good one. Or try to change the setting to **Simple mode**.
