Microsoft's ill-fated Games for Windows LIVE platform has gone the way of the dodo, as one of the bigger games for the service has just been pulled from the service. Dance Central 4 was one of the most high-profile titles that suffered when the service was phased out. And while many of those titles have since managed to find an alternate home on the Xbox 360, the fate of Dance Central 4 has been unclear, although Microsoft assured fans that it was staying put on Xbox Live for the time being. Sadly, Microsoft has now announced that it will not be leaving Dance Central 4 on the service, and will be changing things up. So, when it comes to updates for the game, Xbox One owners will simply need to re-download the title each time it is updated. The good news for Xbox One owners is that this applies to both Xbox One and Windows 10 versions, so console players should get all the updates you've been waiting for. Honestly, it's a good thing that this game is going to be part of the Xbox Live services at this point. D3 was just a complete disaster. I loved that game and am so surprised how bad it was. So, good luck to this game and it's dev team! Anyway, here's to hoping that the Xbox One gets a bit of a boost in this area. Personally I am still on board with Xbox Live as a service, but the fact that Microsoft made a platform exclusive because they were afraid of the Playstation 4 is pretty telling. Granted it's somewhat mitigated by the fact that I really don't care for local multiplayer and only have a Wii U, but the fact that a game platform was driven solely by fear is really not encouraging to say the least. Personally I am still on board with Xbox Live as a service, but the fact that Microsoft made a platform exclusive because they were afraid of

A Place for a Scene You will also be able to record voiceovers for all your characters and even for your enemies! Добавить комментарий You have now made me want to play this... like... now! 'Verify' is a fun game I found on a random website for free. The idea is not the most original one, but you're supposed to click all the boxes containing letters and make as many words as you can. It's a very similar game to Scrabble. I like the idea of the game, but I think you're being a bit overly critical and I'm not really sure why. Sure, the game isn't the most original one, but I love the graphics and the sound. The overall presentation is great! Some more features would make this game really stand out. Like, add more difficulty levels (I liked the easy one but what about medium? And I didn't notice c9d1549cdd

A sequel to Gothic is finally on the way. This game will be one of the first games on PC with a completely new engine. The engine is currently being finalized and nothing is set in stone yet, but you can expect a lot of new features and polished graphics. The development is being led by a member of the original team, one of the leaders of the Gothic series.

Features: New Engine The new engine is being developed from the ground up. By building a completely new engine, the team wants to offer a better experience for the players, while still keeping the classic look and feel of Gothic. Some questions such as: Which texture/model settings to use? What rendering mode to use? etc. are still being studied. The team will be working hard to provide as much feedback as possible.

User-Friendly Interface Keep your workstation up to date with the new UI. Easily add games to your to-do list, read about updates and discuss ideas with other users!

Steam Workshop Support Since Gothic 1 is almost 20 years old, the team wants to give it a complete overhaul. Alongside the new engine, they are working on the User Interface. One of their first big steps will be to include Steam Workshop support. This will allow the community to contribute custom model skins and textures. There will be opportunities for modders to tweak some of the graphics of the game.

More Screenshots: A New Engine: This is a screenshot of the Gothic 1 engine. Notice the "E" which

stands for Evolution. The next screenshot shows the final ingame engine. The UI will be tweaked before the game is released, but this is the final ingame engine. New Features: All the old features are still planned for the game. The team will focus on keeping the good things as well as improving upon what's broken. One of the big focuses is the interface. The UI will be expanded and changed to be user-friendly. The team plans to release a new UI as part of a future update. Webpage: Keep up to date with the development process by following our progress on our new webpage: Hi Folks, My name's Adam, I am one of the lead programmers.
