I just recently discovered the brand new 10.7 & 11.0 and I'm in complete awe of the product features they presented. They are not only easy to operate, they are extremely speedy and very organized

I'm in love. The features you listed are what I need most in a photo editor, and they were able to incorporate them into their flagship software that was easy to use, well organized, and fast. Fantastic and well researched and written.

Cheers!

The review was almost like being there when they were testing the software. The best editorial photo editor yet.

I own the Adobe suite but Photoshop is the best screen capture, editing and presentation tool I have ever used. I've been playing with the newest version of the greatest at work and at home. I have one wish and that is that, as a matter of course, when I do something in the program to save out the picture that I want to share, or to email it directly, I could have a "dumb" photo element (like the name) that is included in the print and e-mail actually made out of that simple photo I just took. For instance, if that original image I took with the new "Adobe Photoshop CC" is saved to my desktop and wherever it sits on the computer, "Adobe Photoshop CC" adds on "Dumb File" in the background of that photo. I could then upload that file to the "Dumb File", make print ready copies anywhere in the world, and also receive a JPEG or whatever the file creator wishes to include. This is a simple way to keep only the vital & important parts of photo files. Thank you for the new version, it is amazing.
