Общее обсуждение: No. Общие предложения: HTML is really a markup language, and as such its main purpose is to describe how data looks, how that data is structured and in what way it should be rendered. In order to provide an HTML file that is intended for a browser, as a minimum one must know what format the browser will expect. In addition to plain HTML, you may also need to provide other elements such as CSS, JavaScript, XML, etc.. What this does is to link to a page that is in a directory that has a `www-authenticate` header with a value of `X-WWW-END-USER`. For example, if you have a login.html file located in a directory called `www-authenticate`, then you would change your `CGI.pm` to:
