

WavesMaxxAudioDriver

The driver includes a WavesMask function that enables you to route audio to specific peripherals. It comes in useful when you want to route audio to the website, or when you want to use the Arduino analog inputs to control sound volume for different instruments. The driver implements various methods of masking and you can create your own by passing a pointer to a function to void WavesMaxxAudioDriver::setMaskingFunction(void (*func)(void)). If you want to route audio to both a speaker and a microphone, call setMaskingFunction(setMaskingFunction()) and implement your own "in and out" function. These instructions apply to Windows XP users that desire to remove this driver. First, double-click on the file C:\Windows\System32\Drivers\WavesMaxxAudioDriver.sys in Windows Explorer. Now press the F2 key (or find it under "settings") in Windows Explorer, and go to the "view" menu at the top of Windows Explorer, and select "Find". In the search box in the upper right corner of Windows Explorer, type WavesMaxxAudioDriver, then press "Enter". In the list of items that Windows Explorer returns, locate the file WavesMaxxAudioDriver.sys. Right-click on the file, and choose "Properties". In the file properties dialog box, make sure that the "Security" and "Permissions" tabs are selected. Under the "Security" tab, select the radio button next to "Read" or "Read & Execute". Under the "Permissions" tab, click the "Advanced" button, and then click on the "Owner" tab. In the "User Or Group" box, type your username. If you are unsure of your username, type your user name or log on as an administrator. In the "Permissions" box, select the checkbox next to "Full Control" and then click "Apply".
