It's a soft gradient between white and dark grey that makes it easier to create and blend the color of an image. You can also create a soft gradient with a regular gradient tool, but the results tend to be less accurate and not as blendable. One of the most exciting new features introduced with Photoshop 20 is the One-Click Delete feature. This allows you to delete objects by just clicking on them in the image. In the drop-down menu, you can choose to keep the original image or view a preview of removing it, and after you decide, you can assemble and create a new image with the items you want to keep. It's a fast way to get rid of objects that render the entire image unusable. Adobe only picked images that are near or at their saturation or one stop less for image size. That gave me a stuck case study: a t-shirt in a dark frame. It was the only shirt with strong red pink against a dark background. The new program is correcting colors. Admittedly, it's not a big problem. The shirt is a defective item. But I felt the program should better detect consistently-incorrect colors.
