It includes tools for creating floor plans, furniture, doors, windows, and other architectural features. The application is primarily used for designing construction projects, particularly buildings and industrial facilities, but it is also useful for architectural design, landscape design, graphic arts, and engineering tasks such as model-making. AutoCAD can be used to view the components of a project in various formats, then edited and modified. It can be used as a CAM (computer-aided manufacturing) application, allowing users to design parts and assemblies for large-scale manufacturing. History AutoCAD was originally developed by Canadian engineer Peter Bosak and introduced in the early 1980s. Bosak, the inventor of AutoCAD, worked at the National Research Council of Canada during the early 1970s as part of the design team developing AutoCAD for the Ministry of Supply (now known as the Department of National Defence). The project, completed in 1975, was a part of a bid to design and develop a CAD system for Canadian use. Development of AutoCAD was initiated in 1976 when Bosak received a research grant from the Royal Bank of Canada to build a CAD system capable of representing and manipulating three-dimensional objects. The program was given the name Autocad. Bosak then left his job at the Royal Bank of Canada in 1978 to work on AutoCAD full-time. AutoCAD was first released to the public in November 1982, when it was introduced to the general public at a national convention for architects and engineers in Montreal, Quebec. In June 1983, it was presented at the International Solid State Circuits Conference (ISSCC) in

History Autodesk Corporation was founded in 1982 by Charles Simonyi and the company's earliest users were engineers at Digital Equipment Corporation and Novell. The first AutoCAD, released in 1984, included a choice of two programming languages: AutoLISP and Visual LISP. AutoLISP was used by the developers of the first version of AutoCAD; but Visual LISP, created by Mike Meeks, was the main language used by engineers to write AutoLISP extensions and user scripts. Naming The name "AutoCAD" is an acronym for Automated Computer-aided Drafting (ACAD). I am looking for technologies that can be used outdoors in a non-line of sight environment where range is limited. I am looking for something that will be used by installers and electricians. I have seen some of the wireless technologies use different frequencies to communicate and I think they might be able to work within the ranges I am talking about. A: Low Frequency Radio is actually the old standard for radio. You can use it from 1Hz to 100Mhz. The range is a couple of miles out to hundreds of miles. The FCC license is for 1 Hz to 30 MHz. For wireless communication, the spectrum is divided up into channels and between channels is squatter spectrum, though you need to be careful using these and respect the rules for how you use them. Commercial, UHF and VHF frequencies are usually in use. 2 meters is about 300 a1d647c40b
