**Gluten-Free Diet for Small Intestinal Bacterial Overgrowth.** Small intestinal bacterial overgrowth (SIBO) is defined as overgrowth of oropharyngeal bacteria that is detected using a standard hydrogen breath test. It is common and may be subclinical, but it is also a known risk factor for small intestinal bacterial translocation, an important step in the development of inflammatory bowel disease and small intestinal epithelial damage. Patients with celiac disease are advised by gastroenterologists to avoid gluten. A review of the literature shows that there are few data on the prevalence and clinical relevance of SIBO in celiac patients. The best validated technique to detect SIBO is with the hydrogen breath test; however, the reliability of this test in celiac patients is not known. A newly developed fructose breath test is more reliable than the hydrogen breath test in celiac patients. It is not known whether a gluten-free diet reduces SIBO in celiac patients or whether SIBO causes small intestinal damage. Further research is needed to determine if a gluten-free diet can reduce SIBO or can prevent small intestinal damage in celiac patients.

a way to get a list of images with statistics like: Uploading time (last x minutes, last x hours) Number of downloads How can I get this information? I cannot find any statistic features in optiva, to get such information I would have to query the system and then just parse a result, which is not performant. I am using optiva for a group of volunteers in my lab and I would like to inform them about images which they have not viewed, but have been seen by other people. A: You are asking about a statistic feature. I can't answer more because I have no idea what you are using, or what features it has. Do you have a login to optiva? Two years ago, as the Hong Kong protests were at their most furious, I visited the city and went out on the streets to report for a journalism project. On that day, the police was using tear gas against crowds. I was caught in the stream, as were many others. I was knocked down twice. I saw a woman lying in a pool of blood. On that day, I thought I had lost my voice forever. That was until I woke up one morning in the hospital ward in the Repulse Bay medical centre, with a sore throat and a runny nose. That night, I was the happiest I have ever been in that room. I had done what the woman I had seen in a pool of blood had been unable to do the night before. I could talk again. And even sound a bit like a reporter. The second time I was knocked down, I continued to survive. I had lost 13 teeth, my lungs were filling up with fluid and my ribs were broken. But I had retained my voice. I lost the confidence that I had gained on the streets of Hong Kong in the last few months. Since then, I have been in and out of hospital. I have put myself through the most vicious cycle of pain I could go through. And through this cycle, I have learned that there are many different ways of living with suffering. And so I have come to the conclusion that every person has their own ability to deal with pain. If you have lost your voice, you can imagine how painful it is. I don't know if the first time I became
