Autodesk eForms is a website and digital application that are said to offer cloud services for the architecture, engineering, and construction industries. One of the popular CAD software programs is the 3D printing software TinkerCAD. Some data files such as: XML, may be created using the FLEX (File-Related XML) Application to the files, so that they may be more easily manipulated in AutoCAD. In these cases, the FLEX application will create a FLEX file, which may be automatically transferred to the proper file format, before being uploaded. Some of the files that may be created include: Bitsmap: An extension of the FLEX file, the Bitsmap may be an image representation of a standard file. It may be a single bitset, for example, of different colors and shading or, multiple bitsets for, for example, the front and the side of the model. When the file is loaded into AutoCAD, the Bitsmap is represented as a palette. Bmp: A bitmap file, which is an image file for displaying one of the colors used in the palette. Dxf: The DXF file is a data format for AutoCAD, allowing 3D models to be stored. It is read-only and not editable, and may be in DWG, DXF or even FBX format. Fib: The Fib extension is an extension of the FLEX file, and may be used for representing a bundle of files, such as those used for 3D printing. Flex: A program that is used to create FLEX files. Lambert: A bitmap created using the Lambert shading technique. Pal: A palette, which may include colors, shades, and type. Sfld: The STEP file format, a file format for 3D surface geometry, used for 3D printing. Xdr: An extension of the FLEX file. AutoCAD was awarded the Readers' Choice Award for Best of Productivity by PC Magazine. See also References Further reading Conrad, Peter, (2002) 'AutoCAD 2002 In A Day', New Riders Press.
